

ON-OFF MOULD COOLING SYSTEM

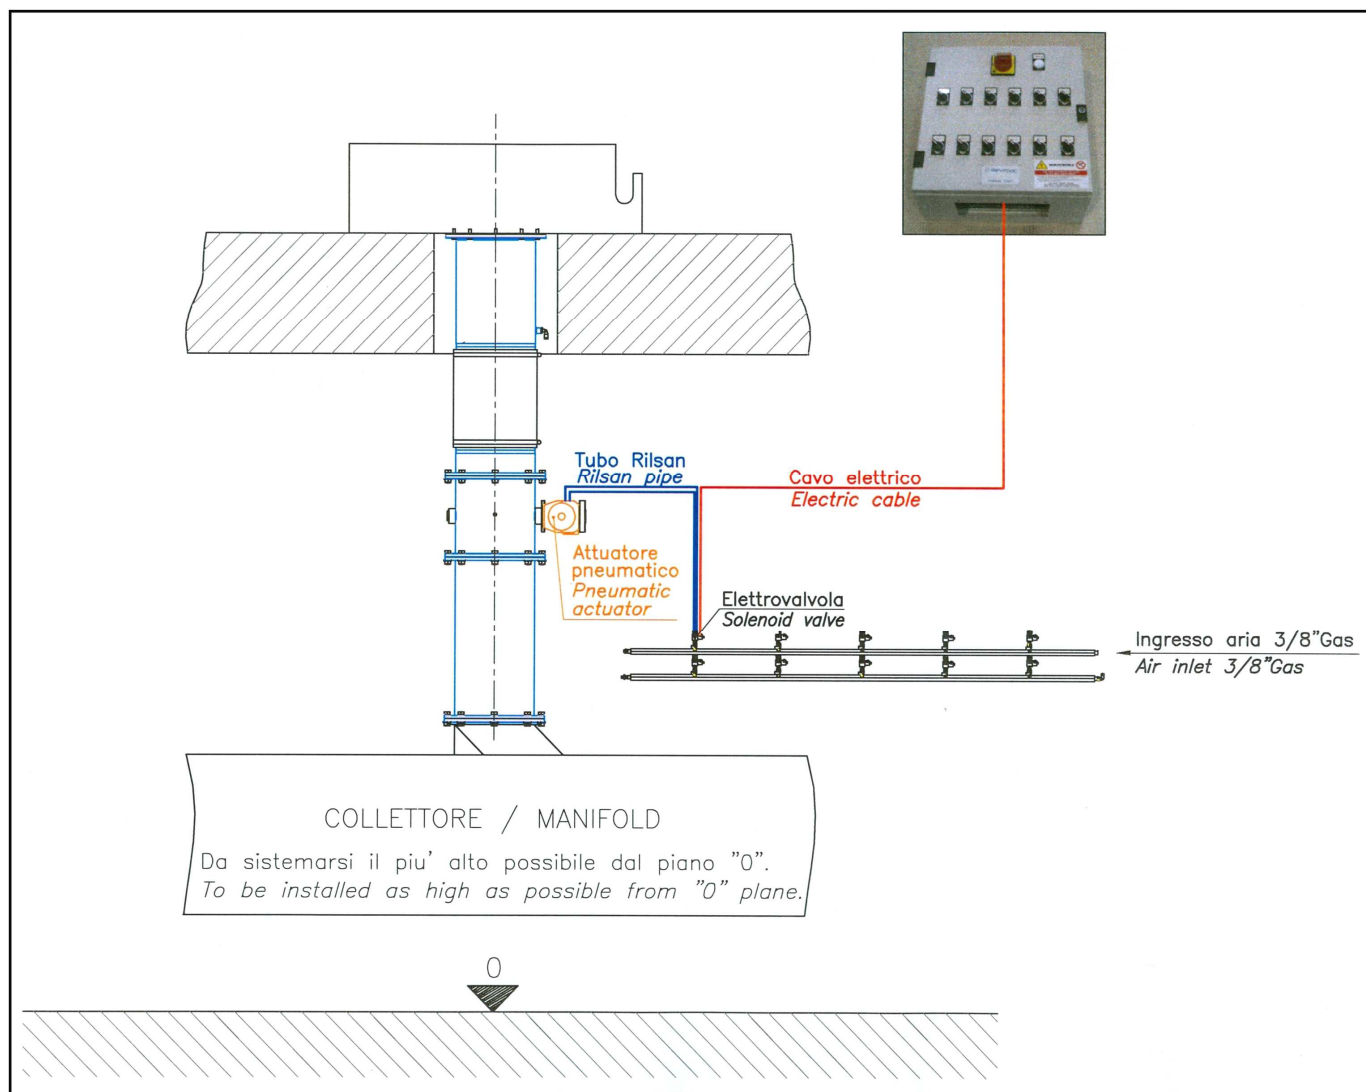

Manual device for
on-off delivery
of cooling air
inside forming
machine modules

Working Principle

This type of *Mould Cooling System* called **On-Off** allows the adjustment of the air flow only in the position of max opening and max closing of the gate valve. No intermediate adjustment is foreseen.

The movement of the gate is carried out by means of pneumatic actuator, connected to a solenoid valve manually driven through a control panel.

This system works independently on each section of the *Forming Machine*.

Technical Features

- ⇒ Air supply: 7 bars
Inlet 3/8"
- ⇒ Power supply: 400 V - 50 Hz single-phase
