

Safety and Utility Ladder for I.S. Machine Blow Side

Equipment designed to enable the operator to work on the blow mould and conveyor side of the I.S. machine under highest safety conditions

Technical Features

- Fabricated metal frame with profile steel steps
- Installed and sliding on a steel rail bolted onto the I.S. machine overhead beam
- Equipped with metallic wheels to enable the manual displacement all along the length of the overhead beam
- Height adjustable operator platform to suit the conveyor height adjustments and the containers dimensional changes
- Weight : 190 kg. approx.

Safety Features

- Locking system to prevent accidental displacement of the ladder
- Heat protection shield (foldable and removable) at the bottom of the platform to protect the operator from the heat of the glass containers passing on the I.S. conveyor.
